DS-START-04
IQRF basic development set
Brief User's Manual

Thank you for buying IQRF development set DS-START-04. It is the basic set for development of IQRF applications fully programmed in C language. It contains hardware and development software with demo source examples and documentation needed to start with IQRF. DCTR (data controlled transceiver) approach for application without programming is also possible, in full (non-demo) version.

To get started, open the IQRF Quick Start Guide and follow the instructions.
